www.mount-it.com

Step 1

Prepare the PC Mount

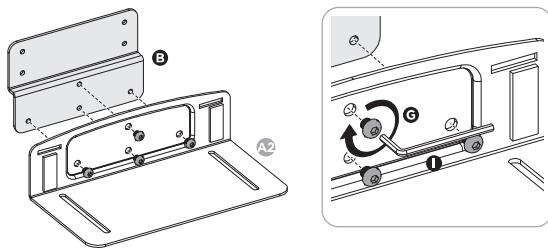

- Remove the nuts from the underside of the PC Mount (#A) and separate the mount into 2 parts.
- Note:** The washers are preinstalled between the two halves of the mount, separate the mount with care to avoid dropping them. The nuts will not be re-used.

Step 2

Attach the Connector Bracket

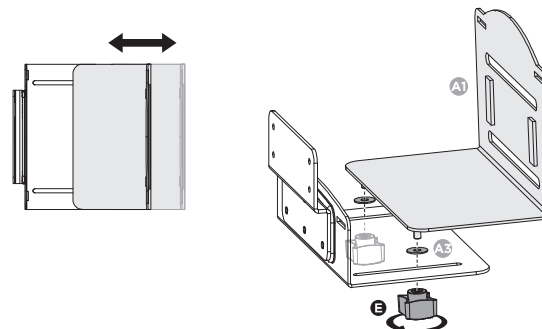

- Attach the Connector Bracket (#B) to the smaller half of the PC Mount (#A) using the M6x6 Bolts (#G) and the 4mm Hex Wrench (#I).

Step 3

Assemble the PC Mount

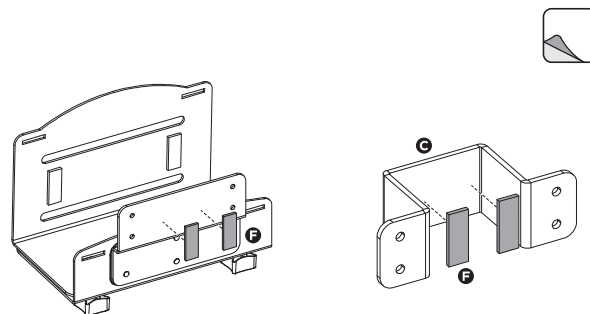

- Reattach the two halves of the PC Mount (#A), ensuring that the washer is placed back in the original location between the two halves of the mount. Tighten the Hand Knobs (#E) onto the threaded bolts to secure the halves together.

Step 4

Install the Pads

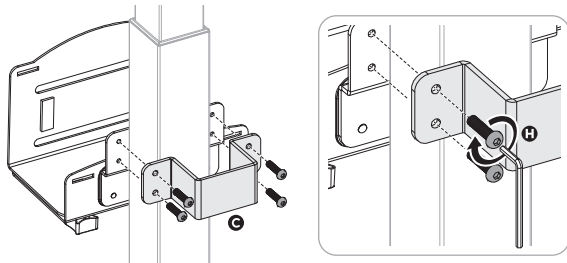

- Peel the backing off the Adhesive Pads (#F) and press them into place on the Connector Bracket (#B) and U-Bracket (#C).

Step 5

Attach the PC Mount to the Column

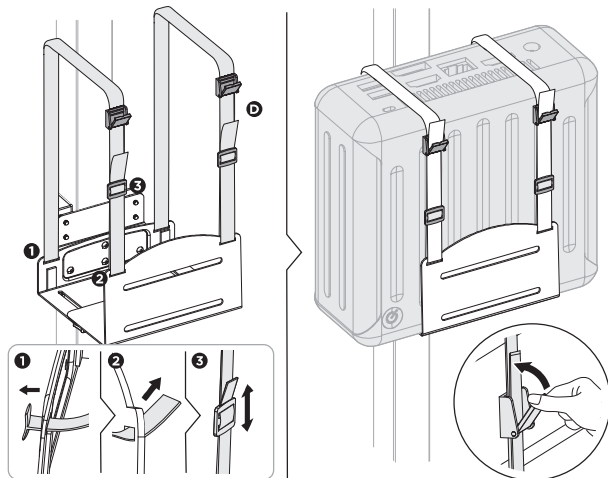

- Attach the PC Mount and Connector Bracket (#B) to the U-Bracket (#C) around the column using the M6x25 Bolts (#H).

Step 6

Secure the PC

- Insert the T-shaped ends of the two PC Straps (#T) through the horizontal slots on the upper left and right of the PC Mount (see the image for reference). For easier adjustments ensure that the latch side of the straps face away from the PC Mount. The straps should be inserted through the slots so that when they are pulled back the T-shaped end of the strap prevents it from coming back through the slot.
- Insert the PC into the mount and secure the sides of the mount fully against the PC case. Pull the straps tight then press the latches down against the straps.
