Step 1

Apply Protective Pads

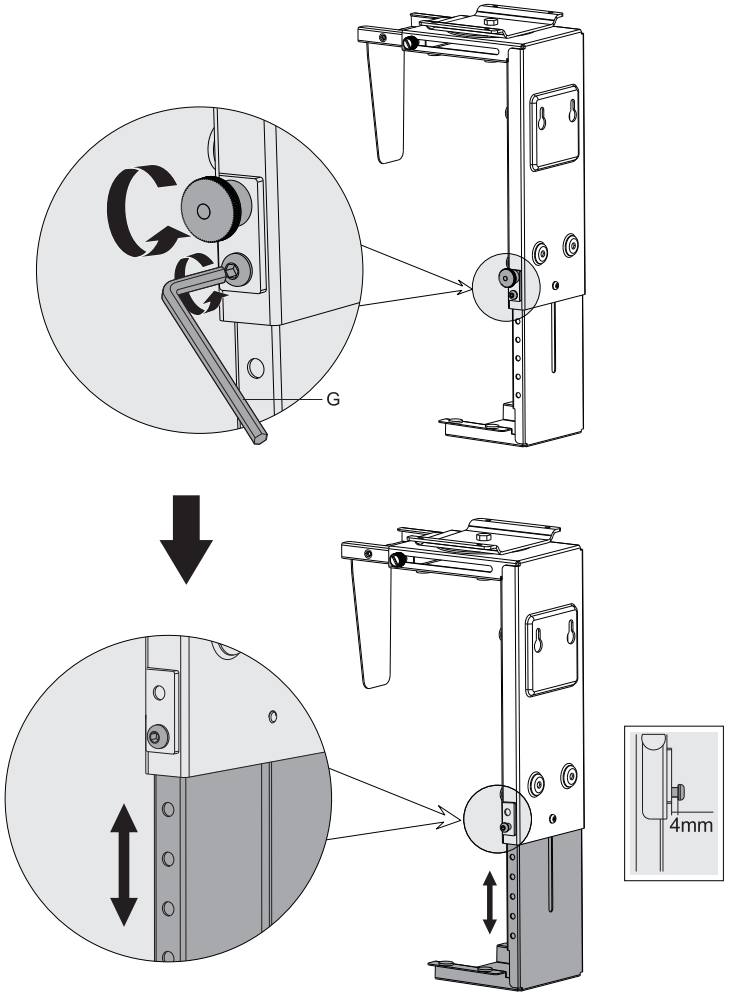

• Apply Protective pads as shown on the CPU Holder so that each interior side has 4 total pads.

Step 2

Extend the Lower Arm

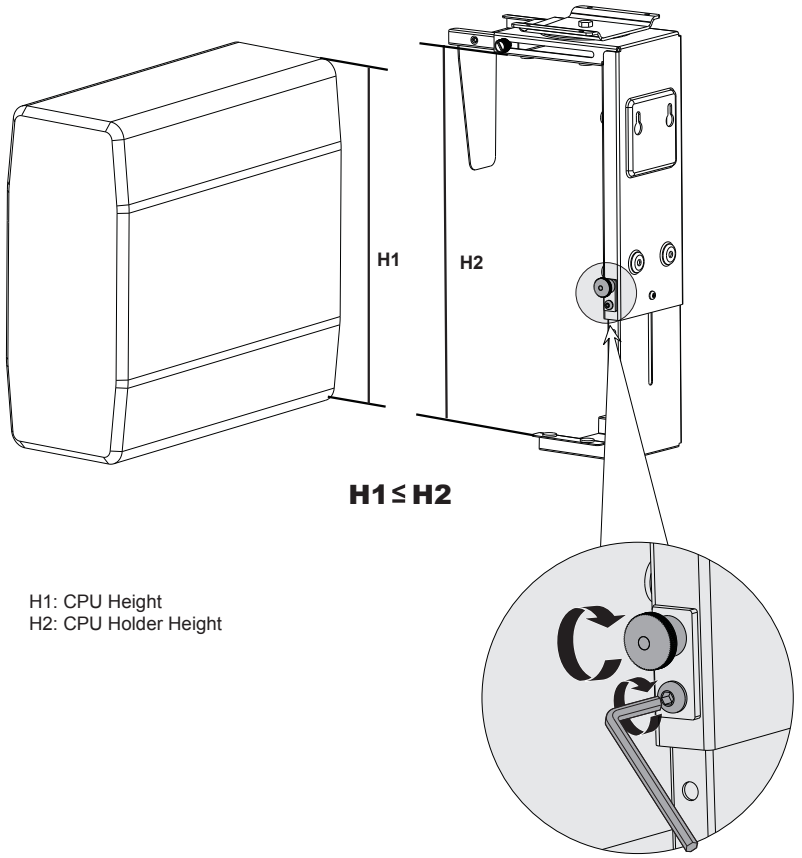

• Open the CPU Holder (#A) to its largest size by loosening the two bolts shown on each side of the mount. The bolts will need to be loosened by about 4mm or more to be able to adjust the width of the mount.

Step 3

Determine the Correct Size for the CPU

• Ensure that your mount is opened to a size greater than or equal to that of your CPU. The mount should be set to the closest size that allows your CPU to fit into the mount. The CPU does not need to fit in snugly in this stage, and a small amount of space being left below the CPU will be common.

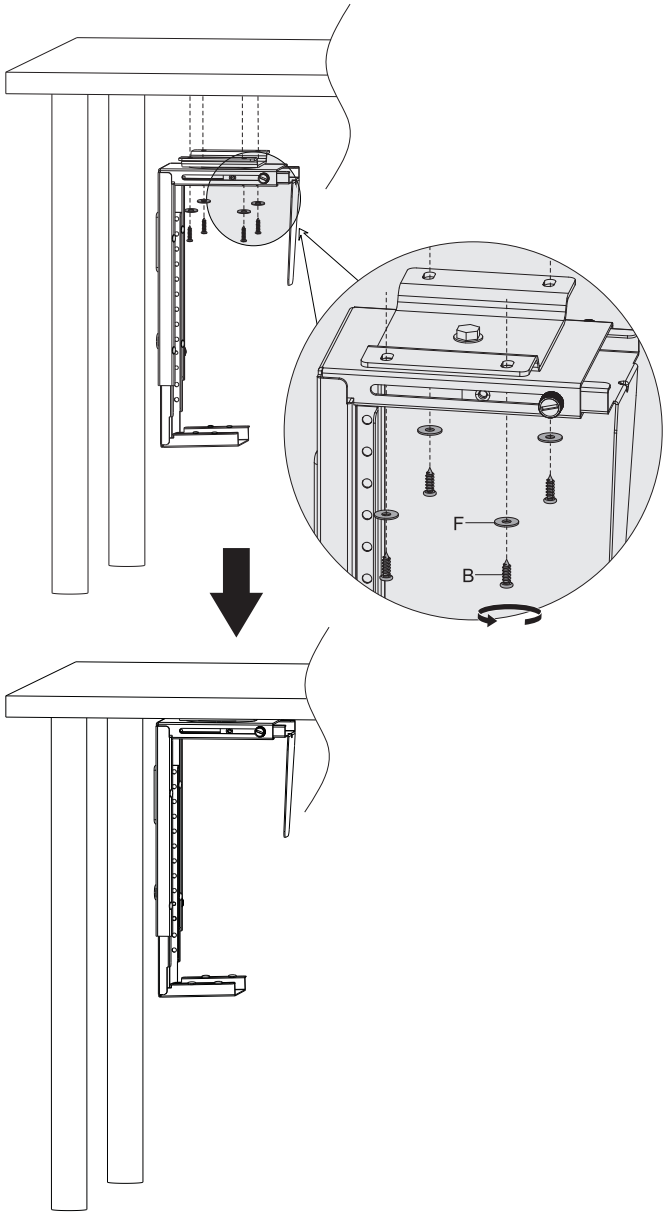

H1: CPU Height
H2: CPU Holder Height

Step 4a-1

Under Desk Mounting Option

• Using Screw (#B) and Washer (#C) attach the CPU Holder (#A) to the underside of your wood desk or similar wood surface. It may be necessary to rotate the swiveling bracket 90° to be able to properly access the mounting holes.

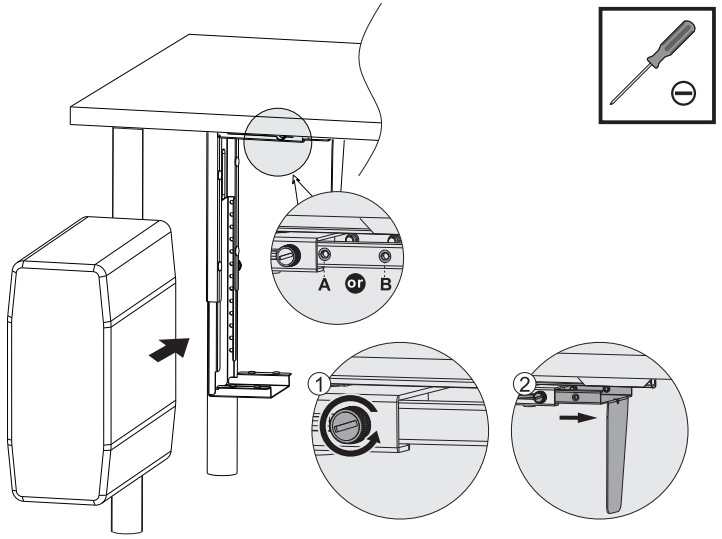

Step 4a-2

Insert the CPU

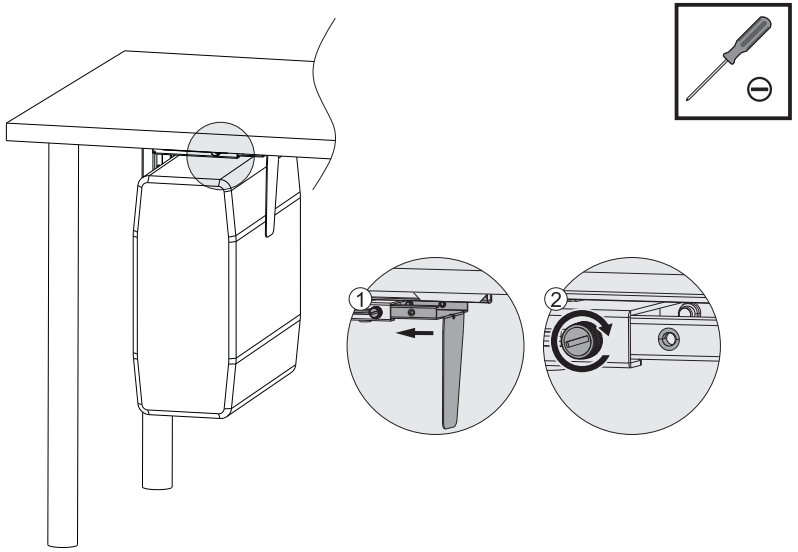

• There are 2 width settings on the horizontal arm shown here as A or B, choose the setting which will be closer or more secure to the side of your CPU.
• Extend the upper arm as shown by loosening the thumb screw in magnification bubble 1 either by hand or with a standard/flat head screwdriver. Pull the arm out as shown in magnification bubble 2 until fully extended.

Step 4a-3

Secure the CPU

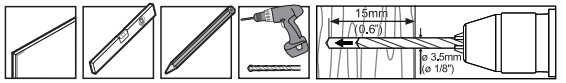

• Insert the CPU and press the arm back in and fasten the thumb screw back down in whichever setting is closer or more secure to the side of your CPU.

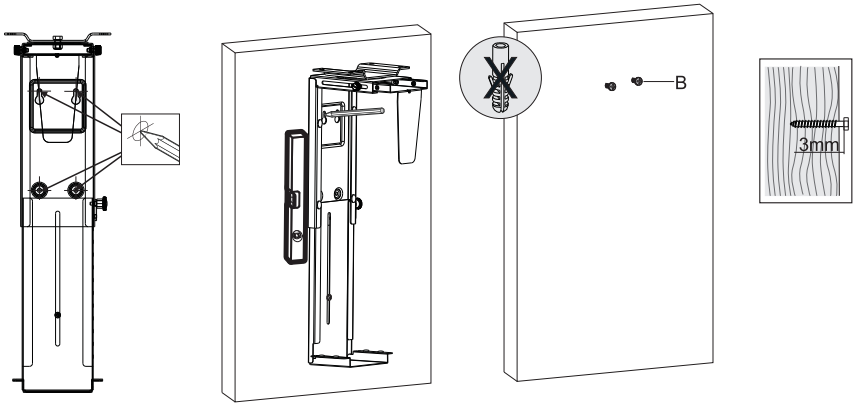

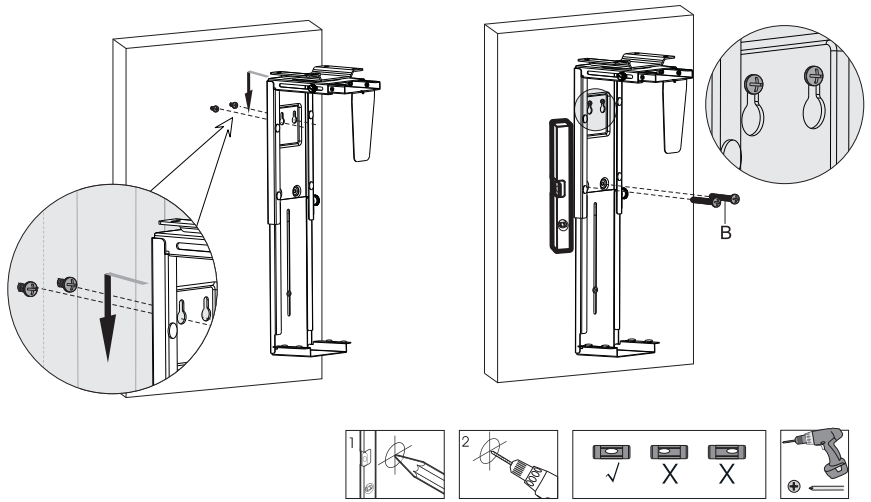

Step 4b

Wood Stud Mounting Option

• Extend the lower arm of the CPU Holder (A#) all the way down so that the 4 mounting holes are accessible from the inside. With a stud finder locate the stud and center the mount on the stud at the desired height. Using a bubble level to ensure straightness mark the center of the mounting holes with a pencil.
• Use a 1/8” drill bit and drill on the marked locations to a depth of 0.6”. Install the upper 2 Screws (#B) only and leave a gap of approximately .1” between the wall and the bottom of the screw head.
• Attach the mount over the two screws as shown and slide it down into place. Install the lower two screws and tighten all 4 screws until secure.

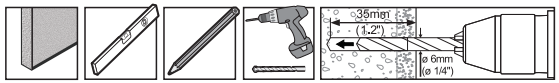

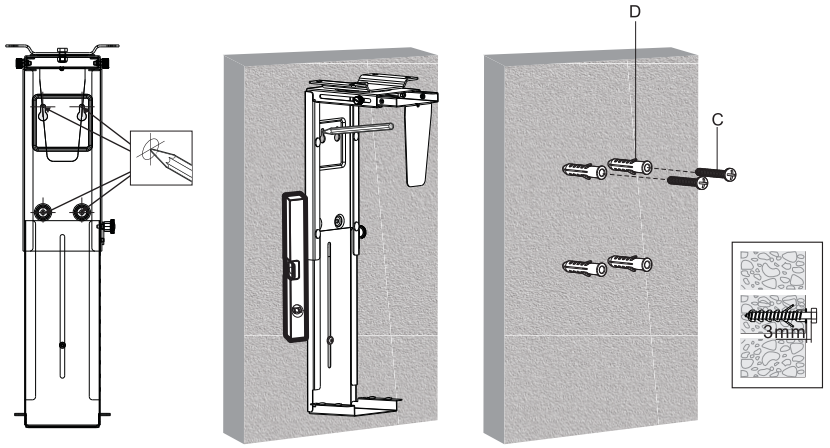

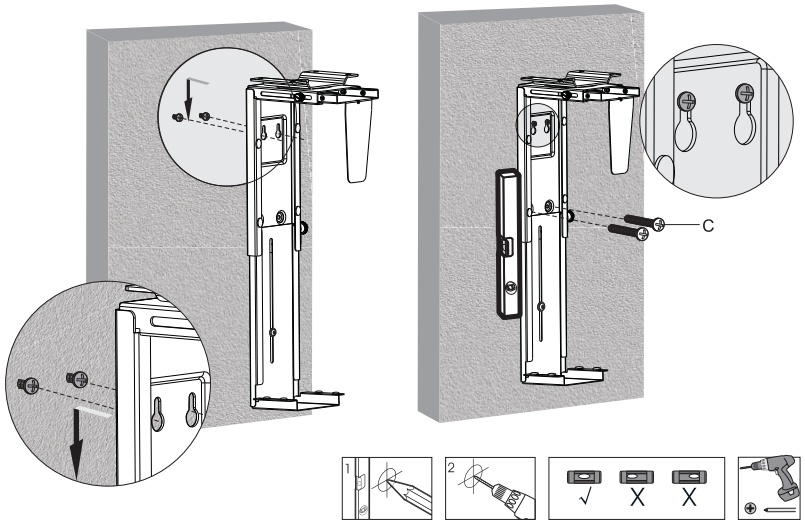

Step 4c

Concrete Mounting Option

• Extend the lower arm of the CPU Holder (A#) all the way down so that the 4 mounting holes are accessible from the inside. Using a bubble level to ensure straightness hold the CPU Holder to the desired location on the wall and mark the center of the mounting holes with a pencil.
• Use a 1/4” drill bit and drill on the marked locations to a depth of 1.2”. Clear any dust and debris from the holes and insert the 4 Concrete Anchors (#D) then install the upper 2 Screws (#B) only and leave a gap of approximately .1” between the wall and the bottom of the screw head.
• Attach the mount over the two screws as shown and slide it down into place. Install the lower two screws and tighten all 4 screws until secure.

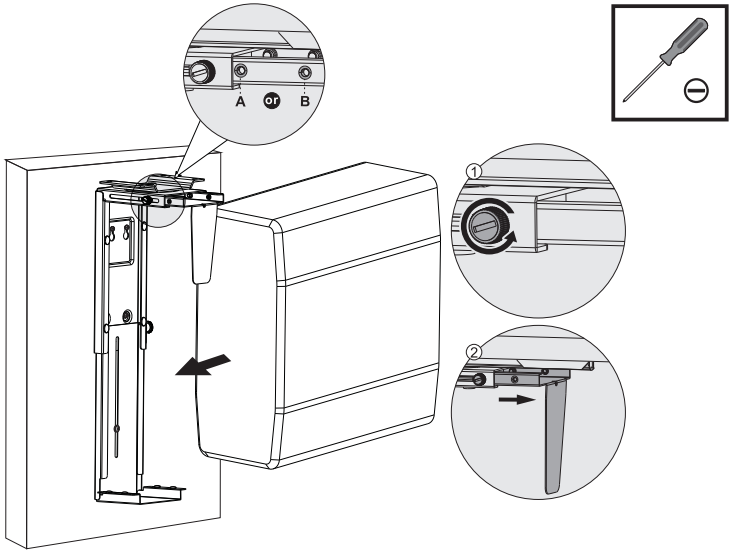

Step 5

Insert the CPU

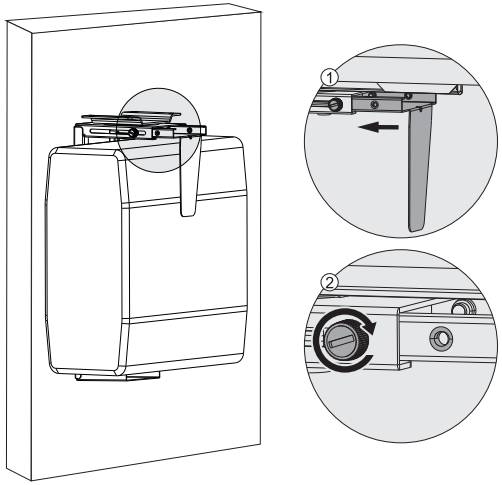

• There are 2 width settings on the horizontal arm shown here as A or B, choose the setting which will be closer or more secure to the side of your CPU.
• Extend the upper arm as shown by loosening the thumb screw in magnification bubble 1 either by hand or with a standard/flat head screwdriver. Pull the arm out as shown in magnification bubble 2 until fully extended.

Step 6

Secure the CPU

• Insert the CPU and press the arm back in and fasten the thumb screw back down in whichever setting is closer or more secure to the side of your CPU.
