DIMENSIONS & WEIGHT CAPACITY

Rated weight capacity is 0.22lbs~2.2lbs
for the mount.

Caution:
Ensure all mounting surfaces are capable of holding the weight of your mount.
DO NOT EXCEED MAXIMUM LISTED WEIGHT CAPACITY.
SERIOUS INJURY OR PROPERTY DAMAGE MAY OCCUR!

Step 1

Step 1a

Clamp Mounting Option

- Open the Clamp Base (#B) until it is at the maximum width by rotating the hand knob counterclockwise.

- Peel the backing off from the Adhesive Pad (#F) and adhere it to the inside top of the clamp as shown here.

- Slide the clamp over the edge of the desk and position it in the desired location.

Note: The clamp is only compatible with desks with a thickness between 0.4"-2.1" (10-55mm)

- Turn the hand knob clockwise to tighten the clamp until it is fully tightened on the desk.

Step 1b

Grommet Mounting Option

- Open the Clamp Base (#B) until it is at the maximum width by rotating the hand knob counterclockwise. Remove the 3 bolts from the inside top of the clamp and detach the mounting base from the clamp.

- Remove the bolt from the middle of the circular plate on the clamp and detach the hand knob with the bolt from the plate and clamp.

Note: it may be easier to remove the bolt by putting a screwdriver through the hole on the clamp as shown here.

- Attach the Grommet Base (#E) to the mounting base using the same 3 bolts. Peel the backing off from the Adhesive Pad (#F) and adhere it to the inside top of the clamp as shown here.

- If your desktop has an existing grommet hole between 0.4"-1.6" in diameter, with a desk thickness of 0.4"-1.6" then it is ready for installation
- If no grommet hole exists in the desktop or not in the required location, then one will need to be drilled. Use a 3/8" (10mm) drill bit to drill a hole through your desktop. The desktop must be between 0.4"-1.6" thick.

- Place the mounting base over the grommet hole and secure from underneath using the long hand knob bolt through the circular plate. Insert the end of the bolt through the desk into the mount base and tighten until secure.

Step 2

Install the Boom Arm

- Loosen the bolt on the back of the mount base until the end of the bolt is not protruding on the inside, then insert the Boom Arm (#A) fully into the top of the clamp or grommet base. Tighten the bolt back down again to prevent the arm from being removed.

Stored energy hazard!

1. Firmly hold the two halves of the spring arm together and have another person cut off the cable tie from around the spring arm.
2. Slowly release the pressure on the spring arm and allow it to gradually stretch to its full extension.

Step 3

Attach the Microphone Mount

- Remove the hand knob from the Microphone Mount (#C) and remove the bolt to disassemble the joint.

- Reassemble the microphone mount back in the same configuration over the end of the boom arm as shown here.

Step 4

Cable Management

- Remove the cable management covers from the back of the boom arm by sliding them up or down lengthwise. Run the cables through the channel then replace the cable covers.

Step 5

Attach the Microphone

• Attach the microphone to the Microphone Mount (#E) on the end of the arm. The Microphone Mount has a dual threaded mount and is compatible with most 3/8" and 5/8" threaded microphone adapters.

Step 6

Balance the Arm

• If the boom arm does not stand up on its own or slowly lowers over time, adjust the screw on the side of the middle joint counterclockwise to add more tension to the arm, and clockwise if the middle joint is too difficult to move. Once finished, press the Arm Joint Cover (#D) into place over the joint.
